SunModo PV Rack Mounting System
UL2703 Compliant
Please read carefully before installing

Product is tested to and recognized to UL 2703 standards for safety grounding and bonding equipment and meets UL 1703 fire standards.

SunModo PV Rack Mount System can be used to mount photovoltaic (PV) panels in a wide variety of locations. All installations shall be in accordance with NEC requirements in the USA. The self-bonding system is for use with PV modules that have a maximum series fuse rating of 30A. Mechanical design loads per UL 2703: Downward Pressure: 33.42 psf (1600.2 Pa), Upward Pressure: 33.42 psf (1600.2 Pa), Down-Slope: 5 psf (239.4 Pa). Mechanical test loads per LTR AE 2012: Downward Pressure: 50.125 psf (2400 Pa), Upward Pressure: 50.125 psf (2400 Pa).

Installer Responsibility

Before ordering and installing materials, all system layout dimensions should be confirmed by field measurements. SunModo reserves the right to alter, without notice, any details, proposals or plans. Any inquiries that you may have concerning installation of the PV system should be directed to your SunModo Sales representative. Consult SunModo Sales for any information not contained in this manual. This manual is intended to be used as a guide when installing SunModo EZ SunBeam Flat Mount systems. It is the responsibility of the installer to ensure the safe installation of this product as outline herein.

- Installer shall employ only SunModo products detail herein. The use of non SunModo components can void the warranty and cancel the letters of UL compliance.
- Installer shall guarantee that screws and anchors have adequate pullout strength and shear capacities.
- Installer shall adhere to the torque values specified in this Instruction Manual.
- Installer shall use anti-seize compound, such as Permatex anti-seize, lubricant is recommended for all threaded parts.
- Installer shall adhere to all relevant local or national building codes. This takes account of those that supplant this document’s requirements.
- Installer shall guarantee the safe placement of all electrical details of the PV array.
- Installer shall comply with all applicable local, state and national building codes, including periodic re-inspection of the installation for loose components, loose fasteners and any corrosion, such that if found, the affected components are to be immediately replaced.
- Installer to ensure the structural support members or footings for mounting the array can withstand all code loading conditions. Consult with licensed professional engineer for the appropriate loading conditions.
- Installer to follow all regional safety requirements during installation.
- This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions.
- Installer shall ensure bare copper grounding wire does not contact aluminum and zinc-plated steel components to prevent risk of galvanic corrosion.
- If loose components or loose fasteners are found during periodic inspection, re-tighten immediately. If corrosion is found, replace affected components immediately.

Safety

Review relevant OSHA and other safety standards before following these instructions. The installation of solar PV systems is a dangerous procedure and should be supervised by trained and experienced personnel.

It is not possible for SunModo to be aware of all the possible job site situations that could cause an unsafe condition to exist. The installer of the roof system is responsible for reading these instructions and determining the safest way to install the ground system. These instructions are provided only as a guide to show a knowledgeable, trained erector the correct part placement one to another. If following any of the installation steps would endanger a worker, the erector should stop work and decide upon a corrective action. Provide required safety railing, netting, or safety lines for crew members working on the roof.
SunModo Self-grounding system

SunModo developed a proprietary grounding and bonding system that is built into the mounting hardware for the rails, clamps and splices. We provide further grounding through all of the SunBeam racking components including the Pipe Caps, Beams, Posts and Post Base Plates. All hardware meet UL 2703 Grounding and Fire Standards tested by ETL.

The basis of the system is our patented stainless steel floating grounding pin which is designed to be captive in the mounting components and provides a bonding path from the PV panel frames to the rails and rail splices, and finally to the ground lug. The self-grounding and bonding system is for use with PV modules that have a maximum series fuse rating of 30A. The maximum number of PV modules is limited by the system voltage, so if a system has multiple inverters, the SunModo racking system can theoretically go on forever.

Finally, we have added a spring and a threadlocker to our Mid Clamp assemblies. The spring keeps the Mid Clamp in the open position ready to receive the solar module. The threadlocker is a light bonding agent allowing the T-Bolt engagement into the Rail when the Collar Nut is turned from above. The threadlocker has the added benefit of being an anti-seize agent for stainless steel hardware in the area where it is applied. For additional anti-seize protection refer to the ‘Tools Required for Installation’ section of this document.

Similarly, the rail splices the grounding pins, eliminating the need for extra bonding components.
EZ SunBeam Flat Roof System Components

End Clamp Kit, fits panel height from 31 to 50 mm. For last 3 digits, see table on last page.

- K10224-1XX
- K10224-1XX-BK

Adjustable End Clamp Kit, fits panel height from 33 to 50 mm.

- K10299-001
- K10299-BK1

Adjustable End Clamp Kit, fits panel height from 30 to 46 mm.

- K10299-002
- K10299-BK2

Grounding Mid Clamp Kit fits panel height from 31 to 50 mm.

May be repositioned until torqued to final value.

- K10180-001
- K10180-001-BK
  For single-use only

Grounding End Clamp Kit with shared rail adaptor for standard rail; fits panel height from 31 to 50 mm. For last 3 digits, see table on last page. May be repositioned until torqued to final value.

- K10183-1XX
- K10183-1XX-BK
  For single-use only

Grounding Mid Clamp Kit with shared rail adaptor for standard rail; fits panel height from 31 to 50 mm. May be repositioned until torqued to final value.

- K10182-001
  For single-use only
Grounding Lug Kit with Grounding Spacer and 1/4-20 T-Bolt. *May be repositioned until torqued to final value.* K10179-001

For single-use only

L-Foot Kit to connect brace to underside of SunBeam. K10066-010

SunBeam Angle Mount joins SunBeam to Rail. Includes 4X 3/8-16 T-Bolts and flange nuts. K10103-004

SB2500 SunBeam Cover (optional) A20237-001

SB3500 Triangular Beam Cover (optional) A20261-001

Metal Rail End Caps available for Helio Standard and Heavy rails (optional)

- HR500 (Super Rail)

HR150 (Open Rail): Features wire management channel and both 1/4" and 3/8" side slots, and 1/4" top slot for clamping PV panels. Available in 124" and 166" lengths. Last 3 digits denote rail length. 4 stock sizes in clear and black.
- A20242-XXX (Clear)
- A20242-XXX-BK (Black)
- HR150 (Open Rail)
2” or 2.5” AL Schedule 10 Pipe cut to length for array design. Last 3 digits denote pipe length.

A20189-XXX
2.375” OD AL Sch. 10 Pipe
A20209-XXX
2.875” OD AL Sch. 10 Pipe

2.375” X 13 gauge and 2.875” X 13 gauge tube cut to length for array design. Last 3 digits denote pipe length.

A21022-XXX
Steel Tube

SB2500 SunBeam Splice includes 4X 3/8-16 T-Bolts and flange nuts.

K10104-001
SB2500 Splice Kit

SB3500 aluminum Triangular Beam splice kit.

K10238-001
SB3500 Splice Kit

3/8” Slot Rail Splice Kit with (2) 3/8-16 hex bolts and flange nuts with integral grounding. *May be repositioned until torqued to final value.*

K10178-001
K10178-BK1
HR250/HR350 3/8” Splice
*For single-use only*

1/4” Slot Rail Splice Kit with (4) bolts and flange nuts with integral grounding. *May be repositioned until torqued to final value.*

K10177-001
K10177-BK1
HR250/HR350 1/4” Splice
*For single-use only*
1/4" Slot Rail Splice Kit with (4) 1/4-20 Bolts and Flange Nuts with integral grounding. **May be repositioned until torqued to final value.**

Pipe Cap Kit, includes setscrews, 4X 3/8-16 T-Bolts and Flange Nuts, Grounding Washer and other hardware.

Post Base Plate Kits for 2.0" AL Schedule 10 Pipes includes 3X Screws.

Steel Post Base Kits for 2.375" OD and 2.875" OD tubing includes 3X Screws.

SunBeam Pipe Clamp Kit available in 2.0" and 2.5" with hardware included.

Side Mount Pipe Cap Kit includes 3/8-16 T-Bolt, Flange Nuts and 4X M10 Set Screws.

Items are listed in the fault current path in order from the PV Panel to the Post Base:

1. PV Panel
2. Grounding Mid Clamp Kit
3. Helio Rail HR150, HR250, HR350 or HR500
4. Angle Mount Bracket Kit
5. SB2500 Aluminum Beam
6. SB2500 Splice Kit (configuration dependent)
7. Pipe Cap Kit
8. Vertical Post
9. 2" Post Base Kit
10. Grounding Lug

Fault Current Path
Tools Required for Installation

Electric Drill or impact driver.
*Note that the use of an impact driver is strongly discouraged for all stainless nut and bolt hardware.*

Roofing Bar

Drill Bit for lag bolts, pilot hole 7/32" diameter for 5/16" lag bolt

3/8" Socket wrench

Sockets for 3/8" drive sockets, 7/16", 1/2", 9/16" and 1-1/16"

Torque Wrench 3/8" drive, 0 to 35 ft. lbs.

Anti-seize compound (Permatex 80071 or equivalent).

Caulk gun and silicon sealant
- ChemLink M1 (or equivalent) for wood and composite roofs.
- ChemLink DuraLink (or equivalent) for metal roofs.
Sunsun
Flat Roof System

Tape measure

Saws for cutting aluminum posts and rails as necessary

**Torque Values for EZ SunBeam Components**

These maximum torque values must be adhered to, both for mechanical strength and to insure the performance of the integral grounding and bonding features. It is recommended that anti-seize compound be applied to the screw threads and a torque wrench be used to measure the bolt torque during final assembly.

EZ SunBeam Tilt-Up System Overview
The EZ SunBeam Tilt-Up system is robust, versatile and specially engineered for multiple configurations. Angles from 10° to 50° can easily be accommodated with the EZ SunBeam Tilt-Up System components. Portrait and landscape oriented PV panels are easy to configure.

The diagram below shows a typical SunBeam Tilt-Up configuration and dimensions as viewed from the East Typical.

Note: Minimum leading edge height to meet a UL1703 PV module fire standard is 24-inches.
EZ SunBeam Flat Roof System Overview

The EZ SunBeam Flat Roof system is perfect to elevate above obstructions like HVAC, pipes and vents. By spanning over obstacles, the SunBeam Flat Roof system takes full advantage of the available roof space. It is recommended that at least 4° tilt be used for flat mounting to stop rain pooling. Check your plumbing code for height clearance requirements.

The diagram below shows a typical Flat Mount Rooftop system configuration and dimensions as viewed from the East.

Note: Minimum leading edge height to meet a UL1703 PV module fire standard is 24-inches.
Installation Instructions:

**Post Base Plate 4 Screw Installation**

Two and four hole mounting in the Post Base Plate can be used. Your structural Engineer should specify the particular type, diameter and length of the mounting screws.

A number of mounting options are available to mount Post Base Plate to the roof of a given building. These include fastening to wood roof joists, fastening to various metal beams and roofs, and fastening to reinforced concrete roof surfaces.

This figure shows the use of the 4 corner holes in the Post Base Plate for mounting using 5/16” Lag Bolts.

**Post Base Plate 2 Screw Installation**

This figure shows the use of 2 corner holes in the Post Base Plate for mounting using 3/8” Lag Bolts.
Installing on a Wood Truss Roof

Rough mark the E-W and N-S desired post locations. Identify the underlying joist positions to support your proposed layout under the roofing.

Locate the Post Base Plate per the layout and fasten to the roof deck. Various fastenings may include lag screws, concrete anchors or self-drilling metal screws. The lag screw mount must be secured to the center 1/3 of the roof joist.

After locating the joist, mark that point. Use a pilot bit 7/32” to drill a pilot hole no more than 3” deep (drill stop will ensure accurate depth).

Clean sawdust with drill and fill hole with sealant, Cheam-link construction sealant or equivalent.

This cross section shows the mounting of a Post Base Plate using lag screws fastened into the wood roof joist. Note that the screw must be fastened into the center 1/3 of the wood joist.
## Installing on a Reinforced Concrete Roof

There are many ways to attach structural members and fixtures to concrete, and the choice of anchoring system depends on a variety of factors. A Structural Engineer should specify the type of concrete fastener to be used.

For new construction consult SunModo before starting your project.

Drill the holes in the concrete and follow the manufacturer’s recommendation on the installation and torque to be used with a particular fastener type.

![Cross section showing the mounting of a Post Base Plate to a precast concrete block.](image)

## Installing on a Steel Beam Roof

A Structural Engineer should specify the method of locating and fastening to a steel roof. Various designs may require the fastening to the Q-decking or directly to the underlying beams.

After locating the Post Base Plate position, mark the holes.

Drill the holes in the roof and follow the manufacturer’s recommendation on the installation and torque to be used with a particular fastener type.

![Cross section showing a method for fastening Post Base Plate to a steel beam.](image)
Post Base Plate to Post Assembly

Insert the Post into the Post Base and secure using the three 3/8 Bolts provided. Torque to 15 ft. lbs.

Post Base Plate Flashing

After installing the Post on the Post Base and securing the post and bonding of the base, the post can be flashed into the roof system. Shown here is a roofer installing a membrane boot to a membrane roof.

Seal the roof around the post. A professional roofer may be called to perform this task.
### Pipe Cap to Post Attachment
Position the Pipe Cap on top of the Post and secure using the Allen Screws provided. The Pipe Cap can be moved up and down approximately 2” to allow for leveling of the Pipe Cap relative to the SunBeam. Torqued to 20 ft. lbs. with a 5mm Allen head drive.

### SunBeam to Pipe Cap Attachment
Insert the supplied 3/8” T-Bolts into the rail slots of the SB2500 SunBeam and through the slots of the Pipe Cap. Secure using 3/8” Flange Nuts. Torque to 15 ft. lbs.

### Angle Mount to SunBeam Attachment
Attach the Angle Mount to the top of the SunBeam in orientation shown. Use the two supplied 3/8” T-Bolts and Flange Nuts to secure. Torque to 15 ft. lbs.
**Angle Mount to Rail Attachment**

Attach the Angle Mount to the Rail using two 3/8" T-Bolts and Flange Nuts.
Locate the T-Bolts in the lowest position in the Angle Mount slots. Once the proper angle for the Rail is set, the Flange Nuts can be tightened. Torque to 15 ft. lbs.

---

**1/4” Slot Rail Splice Attachment**

Where a splice is required for the Helio Rails, the splice should be inserted before the rails are fastened in place.
A 4X 1/4"-20 bolt version of the self-grounding splice can be installed to join rail sections together. Torque 1/4” Flange Nuts to 7.5 ft. lbs.

---

**3/8” Slot Rail Splice Attachment**

Where a splice is required for the Helio Rails, the splice should be inserted before the rails are fastened in place.
A 2X 3/8"-16 bolt version of the self-grounding splice can be installed to join rail sections together. Torque 3/8" Flange Nuts to 15 ft. lbs.
Brace to Pipe Cap Attachment

Where bracing is required, the Brace can be installed onto the Post Cap on one end as shown.

A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.

Attach the other end of the Brace to the Post using a Post Clamp.

Pipe Clamp to Post Attachment

Where bracing is required to a post, a sliding Pipe Clamp is installed as shown. The sliding Pipe Clamp is secured with a 3/8-16 X 2” Hex Bolt and Flange Nut. Torque to 15 ft. lbs.

Install the two Grounding Setscrews in the Pipe Clamp as shown. Using a 5mm hex driver torque to 10 ft. lbs.

The Brace can now be attached to the Post and Pipe Clamp.

Pipe Clamp to Brace Attachment

Where bracing is required to a post, the Brace can be installed onto the Pipe Clamp attached to the Post as shown.

A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.
### L-Foot to SunBeam Attachment

Diagonal bracing can be installed between a vertical Post and the SunBeam using an L-Foot. Mount the L-Foot to the bottom of the SunBeam using a 3/8” T-Bolt and Flange Nut. Torque to 15 ft. lbs.

### L-Foot to Brace Attachment

Where bracing is required to a SunBeam, the Brace can be attached to an L-Foot as shown. A single 3/8-16 X 3-1/2” Hex Bolt and Flange Nut are required. The Star Washer supplied with the kit must be installed under the head of the bolt as shown. Torque to 15 ft. lbs.
### Splice to SunBeam Attachment

Where a splice is required for the SunBeam, the splice should be inserted before the SunBeam is fastened in place.

Slide the SunBeam Splice onto the end of the SunBeam as shown.

Attach the SunBeam Splice using two supplied 3/8" T-Bolts and Flange Nuts. Torque to 15 ft. lbs.

### SunBeam to SunBeam Attachment

Complete the splice by sliding the SunBeam into the SunBeam Splice as shown.

Attach the SunBeam Splice using two supplied 3/8" T-Bolts and Flange Nuts. Torque to 15 ft. lbs.

### Rack Leveling

At this time during the installation, the spacing and leveling of the rack should be checked and adjusted as necessary.
PV Panel Mounting

PV Panel Overhang

For PV panels installed in the Portrait or Landscape orientation the panels can extend beyond the E-W Beam a maximum of 25% of the panel length (Check panel manufacturers mounting requirements).

For a SunBeam system the E-W Beam can extend beyond the Post a maximum of 25% of the E-W Beam length.

The combined maximum cantilever of the PV panel and E-W Beam is 1/3 of the post Span.
Vertical Mount Pipe Cap Kit

SunModo has developed this product for times when a cost effective solution is required for distributing point loads on the roof. The Vertical Mount Pipe Cap Kit is ideal because it attaches to the Rail using one 3/8” T-Bolt. No more sliding the bolts down the length of the Rail, the Side Mount Post Cap attaches where you need it.

Position the Vertical Mount Pipe Cap Kit on top of the Post and secure using the Allen Screws provided. Torqued to 10 ft. lbs. with a 5mm Allen head drive.

Insert the supplied 3/8” T-Bolts into the rail slot and through the slots of the Side Mount Pipe Cap. Secure using 3/8” Flange Nuts. Torque to 15 ft. lbs.
**Clamp Installation – Portrait Orientation**

Proceed with the mounting of the PV panels using the mid and end clamps. Specific mounting instructions are shown in the following sections for Portrait and Landscape mounting.

Installing Mid Clamps: A mid clamp is used between PV panels. It will produce 1/2" spacing between PV panel frames.

An End Clamp is used to secure PV panels at the ends of a row.

**End Clamp Installation**

There must be a minimum of 1.5 inches of Rail extending beyond the PV panel frame.

Clamp the PV panel frame by inserting the T-Bolt into the Rail slot. Position the End Clamp firmly against the PV panel frame and secure using the 1/4-20 Collar Nut. Using a 7/16” socket, torque to 7.5 ft. lbs.

Note: When two or more PV panels are installed grounding via the End Clamp is optional. For a single panel configuration (shown), insert the T-Bolt into a T-Bolt Holder for grounding the panel to the Rails.

**Mid Clamp Attachment**

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4-20 Collar Nut onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.
Clamp Installation – Landscape Orientation

Proceed with the mounting of the PV panels using the mid and end clamps. Specific mounting instructions are shown in the following sections for Portrait and Landscape mounting.

Installing Mid Clamps: A mid clamp is used between PV panels. It will produce 1/2” spacing between PV panel frames.

An End Clamp is used to secure PV panels at the ends of a row.

End Clamp with Shared Rail Adaptor Installation

End Clamps are used at the ends of a row of PV panels.

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot.

Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Nut onto the top of the T-Bolt as shown. After positioning the End Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.

Mid Clamp Installation

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot.

Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Nut onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.
Ground Wire Attachment

The picture shows a single grounding lug mounted on one Rail and a #6 solid copper grounding wire connecting the Ground Lugs to the building ground per NEC 690.47.

The self-bonding system is for use with PV modules that have a maximum series fuse rating of 30A.

Ground Lug Installation

One Rail should have a Ground Lug for fastening the ground conductor to the array. The Ground Lug is mounted on the top or side of the Rail using a special 1/4" T-Bolt, Grounding Spacer, and Flange Nut. Grounding Lugs K10179-001, and detailed installation document D10003 are available from SunModo separately.

Rail End Covers

Rail End Covers can be attached to the mounting rails as shown.

Rail End Covers are also available for the SunBeam Rail not shown.
UL 2703 Label Placement

When requested the UL 2703 Label can be located on the Rail or Rail Splice.

See [www.sunmodo.com](http://www.sunmodo.com) for current warranty documents and information.
