SunModo PV Rack Mounting System
UL2703 Compliant
Please read carefully before installing

Product is tested to and recognized to UL 2703 standards for safety grounding and bonding equipment and meets UL 1703 fire standards.

SunModo PV Rack Mount System can be used to mount photovoltaic (PV) panels in a wide variety of locations. All installations shall be in accordance with NEC requirements in the USA. The self-bonding system is for use with PV modules that have a maximum series fuse rating of 30A. Mechanical design loads per UL 2703: Downward Pressure: 33.42 psf (1600.2 Pa), Upward Pressure: 33.42 psf (1600.2 Pa), Down-Slope: 5 psf (239.4 Pa). Mechanical test loads per LTR AE 2012: Downward Pressure: 50.125 psf (2400 Pa), Upward Pressure: 50.125 psf (2400 Pa).

Installer Responsibility

Before ordering and installing materials, all system layout dimensions should be confirmed by field measurements. SunModo reserves the right to alter, without notice, any details, proposals or plans. Any inquiries that you may have concerning installation of the PV system should be directed to your SunModo Sales representative. Consult SunModo Sales for any information not contained in this manual. This manual is intended to be used as a guide when installing SunModo’s EZ Standing Seam Clamps on pitched roofs. It is the responsibility of the installer to ensure the safe installation of this product as outline herein.

- Installer shall employ only SunModo products detail herein. The use of non SunModo components can void the warranty and cancel the letters of UL compliance.
- Installer shall guarantee that screws and anchors have adequate pullout strength and shear capacities.
- Installer shall adhere to the torque values specified in this Instruction Manual.
- Installer shall use anti-seize compound, such as Permatex anti-seize, lubricant is recommended for all threaded parts.
- Installer is responsible to install EZ Standing Seam Clamps over a Fire Resistant roof covering rated for the application.
- Installer is responsible to determine that the roof, its rafters, connections, and other architectural support components can sustain the array under all code level loading conditions.
- Installer shall adhere to all relevant local or national building codes. This takes account of those that supplant this document’s requirements.
- Installer shall guarantee the safe placement of all electrical details of the PV array.
- Installer shall comply with all applicable local, state and national building codes, including periodic re-inspection of the installation for loose components, loose fasteners and any corrosion, such that if found, the affected components are to be immediately replaced.
- Installer to ensure the structural support members or footings for mounting the array can withstand all code loading conditions. Consult with licensed professional engineer for the appropriate loading conditions.
- Installer to follow all regional safety requirements during installation.
- This racking system may be used to ground and/or mount a PV module complying with UL 1703 only when the specific module has been evaluated for grounding and/or mounting in compliance with the included instructions.

Safety

Review relevant OSHA and other safety standards before following these instructions. The installation of solar PV systems is a dangerous procedure and should be supervised by trained and experienced personnel.

It is not possible for SunModo to be aware of all the possible job site situations that could cause an unsafe condition to exist. The installer of the roof system is responsible for reading these instructions and determining the safest way to install the roof system. These instructions are provided only as a guide to show a knowledgeable, trained erector the correct part placement one to another. If following any of the installation steps would endanger a worker, the erector should stop work and decide upon a corrective action. Provide required safety railing, netting, or safety lines for crew members working on the roof.
EZ Standing Seam Roof Mounting System Components

**EZ 1” Mini Standing Seam Roof Mounting Kit includes:**
- 1” Standing Seam Clamp
- M10 Set Screw
- M10 Flange Bolt

**EZ 1” Standard Standing Seam Roof Mounting Kit includes:**
- 1” Standing Seam Clamp
- 2X M10 Set Screw
- M10 Flange Bolt

**EZ 2” Mini Seam Roof Mounting Kit includes:**
- 2” Standing Seam Clamp
- M10 Set Screw
- M10 Flange Bolt

**EZ 2” Standing Seam Roof Mounting Kit includes:**
- 2” Standing Seam Clamp
- 2X M10 Set Screws
- M10 Flange Bolt

Aluminum L-Foot available in clear and black. 3/8” Flange Nut and Bolt included

### Fault Current Path Diagram

Items are listed in the fault current path in order from the PV Panel to the Grounding Lug:

1. PV Panel
2. Grounding Mid Clamp Kit
3. Helio Rail HR150, HR250, HR350 and/or HR500
4. Grounding Lug

Fault Current Path
Tools Required for Installation

Electric Drill or Impact Driver.  
*Note that the use of an impact driver is strongly discouraged for all stainless nut and bolt hardware.*

---

3/8” Socket wrench

---

Sockets for 3/8” drive sockets, 7/16”, 1/2”, 9/16” and 1-1/16”

---

Torque Wrench 3/8” drive, 0 to 35 ft. lbs.

---

Anti-seize compound (Permatex 80071 or equivalent).

---

Tape measure

---

Saws for cutting aluminum posts and rails as necessary

---

Chalk line or laser
Torque Values for Pitched Roof System
These values must be adhered to, both for mechanical strength and to insure the performance of the integral grounding and bonding features. It is required that a torque wrench be used to measure the bolt torque during final assembly, and it is recommended that anti-seize compound be applied to the screw threads.

</table>
**Portrait Panel Configuration**

With a full range of components the EZ Standing Seam Roof Mounting System can be configured in an endless variety of designs.

A typical portrait roof layout features two East-West rails mounted to North-South seams using the EZ Standing Seam Roof Mounting System. Mid Clamps are used between PV panels, they will produce 1/2" spacing between PV panel frames. End Clamps are used to secure PV panels at the ends of a row.

The EZ Standing Seam Roof Mounting System can be mounted in a staggered fashion so that the loads are shared across the seams. Consult a structural engineer for attachment frequency and roof construction.

SunModo does not recommend mounting of the Standing Seam Clamps on any steel roofing metal less than 26 gage or aluminum roofing of less than .032". For thinner metal roofing, a penetration mount such as the EZ Metal Roof Mount or the Ridge Bridge bolted to a rafter or purlin is recommended.
EZ Standing Seam Roof Mounting System Installation

1” Clamp Installation
Select the correct EZ Standing Seam Roof Mounting System to fit your roof. Snap a line or use a laser to line up the clamps on the roof panel seams.

1” Clamp Attachment
Tighten to 4.5 ft. lbs. of torque for steel or aluminum roof panels.

1” Clamp with L-Foot
Install the L-Foot to the Standing Seam Clamp in the desired orientation. Then attached the HR Series Rail to the L-Foot.
2” Clamp Installation

Select the correct EZ Standing Seam Roof Mounting System to fit your roof. Snap a line or use a laser to line up the clamps on the roof panel seams.

Assemble the 2” Clamp in place by sliding the two halves together.

2” Clamp Attachment

Install the L-Foot to the Standing Seam Clamp in the desired orientation; torque to 15 ft. lbs. Then tighten the M10 Set Screws to 4.5 ft. lbs. of torque for steel or aluminum roof panels.

**Warning:** The 2” Clamp must have the L-foot or PV Kit in place prior to torqueing to 4.5 ft lbs (6.1 Nm).

**Avertissement:** Le collier en L ou le kit PV doit être en place sur la pince de 2 po avant le serrage à 6,1 Nm (4,5 pi-lb).

2” Clamp with Rail

Attached the HR Series Rail to the L-Foot using 3/8 hardware; torque to 15 ft. lbs.
**Minimum Panel Height**

Minimum leading edge height to meet a UL1703 PV module fire standard is 3 inches.

**End Clamp Attachment**

There must be a minimum of 1.5 inches of Rail extending beyond the PV panel frame. Clamp the PV panel frame by inserting the T-Bolt into the Rail slot. Position the End Clamp firmly against the PV panel frame and secure using the 1/4-20 Collar Bolt. Using a 7/16” socket, torque to 7.5 ft. lbs.

**Mid Clamp Attachment**

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4-20 Collar Bolt onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.
Landscape Panel Configuration
The EZ Standing Seam Roof Mounting System conveniently accommodates landscape configurations to minimize roof time and parts required. Our Shared Rail Adaptors End Clamps and Mid Clamps kit converts standard HR Rail to shared rail to allow landscape mounting of PV panels on E-W rails. Because the rails are shared, a two-up installation would require only three rails as compared to four for a standard mid and end clamp system.

These pre-assembled Mid Clamps have a unique T-Bolt locking feature that ensure the T-Bolt remains vertical and in full contact with the rail to eliminate pull out. The spring-loaded top clamp and open collar nut accommodates module frames from 31 to 50 mm. The added threadlocker easily engages the T-Bolt from the top of the collar nut. The shared rail adaptor converts standard rail to shared rail to allow landscape mounting of PV panels on E-W rails.

The SunModo self-grounding system that includes the pre-assembled universal bonding clamp eliminates separate module grounding hardware and saves installation cost.
### Minimum Panel Height

Minimum leading edge height to meet a UL1703 PV module fire standard is 3 inches.

![Minimum Panel Height Image](image)

### Shared Rail End Clamp Attachment

End Clamps are used at the ends of a row of PV panels.

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Bolt onto the top of the T-Bolt as shown. After positioning the End Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.

![Shared Rail End Clamp Attachment Image](image)

### Shared Rail Mid Clamp Attachment

Insert the T-Bolt in the Rail slot and turn clockwise 90° to engage the head into the slot. Insert Grounding T-Bolt Holder to lock T-Bolt in place.

Thread the 1/4” Collar Bolt onto the top of the T-Bolt as shown. After positioning the Mid Clamp firmly against the PV panel frame, using a 7/16” socket, tighten to 7.5 ft. lbs.

![Shared Rail Mid Clamp Attachment Image](image)
**Ground Wire Attachment**

The picture shows a grounding lug mounted on one Rail per row of panels, and a #6 solid copper grounding wire connecting the Ground Lugs to the building ground per NEC 690.47.

**Ground Lug Installation**

One Rail per row of panels should have a Ground Lug for fastening the ground conductor to the array. The Ground Lug is mounted on the top or side of the Rail using a special 1/4" T-Bolt, Grounding Spacer, and Flange Nut. Grounding Lugs K10179-001, and detailed installation document D10003 are available from SunModo separately.

**Rail End Covers**

Rail End Covers can be attached to the mounting rails as shown.
UL 2703 Label Placement

When requested the UL 2703 Label can be located on the Rail or Rail Splice.

See www.sunmodo.com for current warranty documents and information.
